# Lab 12: Capstone: Luxury Hotel Handwashing Poster

Level: Advanced Suggested time: 120 minutes Platform: Complete the core brief in either Procreate or Sketchbook Studio; use the comparison notes to transfer the workflow. Alignment: K1-K10 | A1-A5 | LO1-LO3

## Scenario

A Singapore luxury hotel commissions an elegant, inclusive handwashing poster for guest washrooms.

Your role: Lead digital artist Required deliverable: A4 portrait poster, working file, exported PNG/PDF, critique record and five-decision rationale.

## Learning goal

Apply Brief | sketch | brush | colour | form | layers | perspective/depth | overlays | critique | export to a real design decision and produce evidence that meets explicit acceptance criteria.

## Before you begin

- Use an iPad that supports your chosen app and a compatible stylus where available.
- Save an editable, layered master before exporting a flattened image.
- Use only owned, licensed or clearly permitted reference images and record their sources.
- Create a folder named Lab-12-<YourName> for working files and evidence.

## Part A - Plan and construct

1. Restate the hotel commission as measurable criteria: immediate sequence clarity, credible luxury, inclusive contrast and manageable sensory load.
2. Create at least three portrait thumbnails; select one with a documented function-appeal trade-off.
3. Build an A4 portrait master with named guide, sketch, line, flat, instruction, light, texture and finish layers.
4. Establish the instruction hierarchy before decorative illustration.
5. Develop an original palette and form language from multiple documented references.
6. Use selective texture, overlays and light to create refinement without reducing legibility.
7. Complete A1-A5 review notes, revise, then export the layered master, PNG, PDF and evidence contact sheet.

## Part B - Procreate pathway

1. Create an A4 portrait canvas at print-ready pixel dimensions and confirm the colour profile for delivery.
2. Use separate layer groups for Instruction, Illustration and Atmosphere; keep editable text where used.
3. Apply perspective/drawing guides only when they support objects; keep instruction alignment on a clean grid.
4. Use Alpha Lock, Clipping Masks and Layer Masks to preserve editability across colour, texture and light.
5. Run controlled Hue/Saturation/Curves or Gradient Map tests on duplicates, not the only master.
6. Use Actions → Share for PNG/PDF and preserve the .procreate master with all named layers.
7. Create a contact sheet showing draft, critique annotations and final revision.

## Part C - Sketchbook Studio pathway

1. Choose an A4-like portrait page size/template where available and document the pixel dimensions.
2. Build separate layer groups or clearly ordered layers for instruction, illustration and atmosphere.
3. Use the Grid/Ruler for instruction alignment and Symmetry only where it serves the chosen motif.
4. Use per-layer opacity/blend controls for non-destructive colour, texture and light decisions.
5. Use Mono and reduced-zoom checks on duplicates to validate accessibility and sensory load.
6. Export a high-resolution image/PDF through the available share workflow and keep the on-device layered master.
7. Optionally preview the finished poster with the AR effect; treat it as contextual evidence, not a print-colour proof.

## Evidence and acceptance checklist

[ ] Instruction sequence is immediately understandable

[ ] Luxury cues do not reduce legibility

[ ] Layered file supports revision

[ ] Design passes greyscale, thumbnail and sensory-load checks

[ ] Rationale documents A1-A5 decisions

[ ] Layered working file is saved and opens correctly.

[ ] Final export uses a clear filename and matches the intended dimensions.

[ ] At least one in-progress screenshot shows the technique in use.

[ ] Reference sources and design decisions are recorded.

## Peer review questions

1. What did you remove because it failed the function?
2. Which trade-off best balances clarity and appeal?
3. Which enhancement most strengthens sensory appeal?
4. What protects users from overload?
5. What makes the final aesthetic original and appropriate?

## Debrief

Use the Observe → Interpret → Connect → Propose pattern:

1. Observe: State what is visible without praise or blame.
2. Interpret: Explain the likely effect on attention, meaning, emotion or use.
3. Connect: Link the effect to the brief, a design principle or the acceptance criteria.
4. Propose: Name one specific change and how you will check whether it works.

Record one decision you will keep, one change you will test, and one technique you can transfer to the other app.

## Troubleshooting

- The line feels wobbly: Zoom out, slow the decision rather than the stroke, use shoulder movement, and increase stabilisation only enough to preserve intent.

- Colour leaks during fill: Close the contour, inspect gaps at 100%, or place colour on a separate layer and clean with the precise eraser.
- The file becomes hard to edit: Name or document layer roles, hide unused experiments, group related stages and duplicate before merging or filtering.
- The image looks muddy: Check value grouping, lower overlay opacity, remove competing texture and restore one clear focal contrast.
- Perspective feels wrong: Return to horizon and vanishing logic; correct the large box before windows, props or decoration.

## Submission package

Submit Lab-12-<YourName>/ containing:

- layered working file (or the app's saved layered sketch);
- final PNG/JPEG/PDF as required by the brief;
- progress evidence/contact sheet;
- short design rationale answering the peer-review questions; and
- reference/provenance list.
